

February 7, 2025

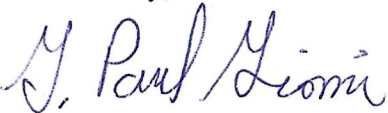

To: DeVry Scholarship Fund,

Samuel Pearce was a recent student of mine having taken my NETW212 – Introduction to Cloud Computing course during the November 2024 session. This course is part of the DeVry undergraduate program and deals with the fundamentals of how a company could determine and use Cloud-based networking resources. What they are, how they work, and the pros and cons for a company to use them. This class is normally taught in regular class settings that require students to do in-class work, where students answer threaded discussion questions, take quizzes, and other assignments. This course had a combination of onsite and online students. Samuel was an online student and that is the format that I interacted with him, online.

Samuel was always one of the first students to post responses to my threaded discussion questions, complete the weekly assignments, and get everything done days before they were due. He always got A's and full points on all his tests, an A overall in the course, and was cordial to all the other students in his interactions with them online in threaded discussion postings.

One of the many things that impressed me about Samuel was his desire to learn as much as he could about the topics covered each week. He asks probing questions and was always extremely detailed in his postings. Samuel was an outstanding student in my class, and I couldn't ask for any more of him than what he was doing. He always did what was expected of him in a professional manner with attention to detail. He has no problem doing what is asked of him and is eager to help and learn from his experiences.

Yours Truly,

G. Paul Giomi
